

ARMOR
CONTRACT MANUFACTURING

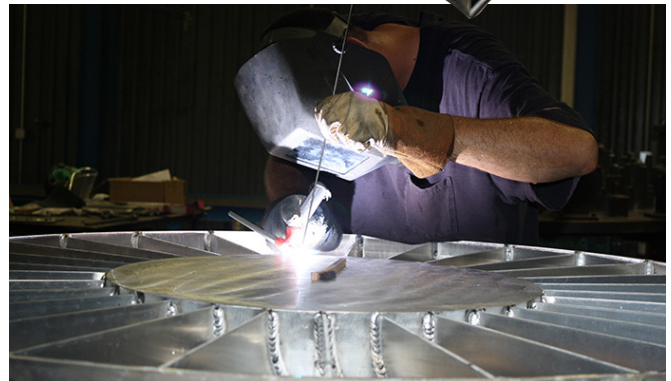

Fabrication

The capabilities and expertise
to handle all your needs

Armor Contract Manufacturing is your one-stop solution for a wide variety of custom designed, engineered products.

We are experienced in both large and small production runs, large scale units, and building to government specifications.

Armor's comprehensive approach to the manufacturing process is centered on the metal fabrication process. All individual parts and components, either designed by our engineers or based on provided designs, can be cut to spec and then fabricated into sub-assemblies or complete products at Armor's Mason facility. Our production team includes experienced welders and fabricators; skilled in quick and accurate assembly of many products. Upon final assembly, products can be prepped in our media blast or steam cleaning booths before final finish is applied. Armor offers a variety of top coat options, including CARC paint, traditional wet-coat paint, and powder coat.
